U.S. Net International Investment Position at Yearend, 2000

At yearend 2000, the negative international investment position of the United States was substantially larger than at yearend 1999. The negative position reflects the amount by which the yearend value of foreign investments in the United States exceeded the yearend value of U.S. investments abroad. According to the U.S. Bureau of Economic Analysis, the net international investment position of the United States at yearend 2000 was a negative \$1,842.7 billion with direct investment valued at the current cost of replacing plant and equipment and other tangible assets, and the position was a negative \$2,187.4 billion with direct investment valued at the current stock market value of owners' equity (Table 1).

The negative position valued at the current cost of tangible assets increased \$742.9 billion from \$1,099.8 billion (revised) at yearend 1999, and the negative position valued at current stock-market value increased \$662.1 billion from \$1,525.3 billion (revised) at yearend 1999. Both measures increased mainly as a result of large net foreign acquisitions of U.S. assets and sizable exchange rate depreciation of U.S. assets abroad.

Foreign acquisitions of assets in the United States increased sharply in 2000. Net foreign purchases of U.S. securities other than U.S. Treasury securities were a record. Foreign direct investment in the United States was a near record. U.S. liabilities reported by banks and by nonbanks increased sharply.

U.S. acquisitions of assets abroad also increased sharply in 2000. U.S. claims on foreigners reported by U.S. banks and nonbanking concerns increased substantially. U.S. direct investment abroad and net U.S. purchases of foreign securities remained strong.

Price depreciation of U.S. corporate stocks decreased the value of foreign holdings of U.S. stocks and also decreased the value of foreign direct investment in the United States when measured on a market value basis. Foreign stock prices also declined, reducing the value of U.S. investment in foreign stocks and in U.S. direct investment abroad when measured on a market value basis.

Net exchange rate depreciation, principally on U.S.-held foreign stocks and on U.S. direct investment abroad when measured on a market value basis, reflected the depreciation of the Euro and of the Japanese and the Canadian currencies against the dollar from yearend 1999 to yearend 2000.

Valuation Methods for Direct Investment

The current-cost method values the U.S. and foreign parents' share of their affiliates' investment in plant and equipment using the current cost of capital equipment, in land using general price indexes, and in inventories using estimates of their replacement cost. The market-value method values the owners' equity component of the direct investment position using indexes of stock market prices.

The historical-cost method values all assets and liabilities at their book value. This method is only used to present country and industry detail.

U.S.-owned assets abroad increased \$246.1 billion to \$6,167.2 billion with U.S. direct investment valued at current cost, and they decreased \$16.5 billion to \$7,189.8 billion with U.S. direct investment valued at market value due to declines in foreign stock prices. (Position estimates have been revised. See section on revisions beginning on page 4 of this release.)

Claims on foreigners reported by U.S. banks increased \$176.3 billion to \$1,276.7 billion. The increase in claims resulted from strong lending to foreigners, fueled by financing requirements of numerous large mergers and acquisitions in Europe through participation in syndicated loans, and by the need to supply funds to the bond market, particularly in the fourth quarter. Large increases in placements of foreign commercial paper in the United States also contributed to the increase in claims.

U.S. holdings of foreign securities decreased \$197.9 billion to \$2,406.5 billion. For stocks, large negative valuation adjustments--from sharp price depreciation of Japanese, Canadian, and most European stocks, and from exchange rate depreciation of most foreign currencies against the value of the U.S. dollar--more than offset large net

purchases. For bonds, U.S. holdings were unchanged as the step-up in net U.S. purchases was offset by price declines and exchange rate losses on foreign currency-denominated bonds.

U.S. direct investment abroad at current cost increased \$117.2 billion to \$1,445.2 billion; at market value, it decreased \$145.4 billion to \$2,467.8 billion. In 2000, net financial outflows were \$152.4 billion, down slightly from the prior year's record. By account: Net equity capital outflows declined; reinvested earnings increased sharply; and net intercompany debt outflows declined. At current cost, large financial outflows more than accounted for the increase in the position. At market value, large financial outflows were more than offset by the decline in U.S. owners' equity as a result of the sharp decline in foreign stock prices from yearend 1999 to yearend 2000, and by depreciation of foreign currency-denominated assets due to the increase in the value of the U.S. dollar against most foreign currencies in 2000.

Claims on unaffiliated foreigners reported by U.S. nonbanking concerns increased \$157.5 billion to \$825.3 billion. U.S. deposits in foreign banks accelerated sharply.

U.S. official reserve assets decreased \$8.0 billion to \$128.4 billion, mostly reflecting a drop in the market value of the U.S. gold stock and a decline in the value of foreign currency-denominated assets.

Foreign-owned assets in the United States increased \$989.0 billion to \$8,009.9 billion with foreign direct investment valued at current cost, and they increased \$645.6 billion to \$9,377.2 billion with foreign direct investment valued at market value. (Position estimates have been revised. See section on revisions beginning on page 4 of this release.)

Liabilities to private foreigners and international financial institutions reported by U.S. banks increased \$72.6 billion to \$1,139.8 billion, representing heightened U.S. and international demand for bank credit. Inflows from overseas were one source of funding for the acceleration in U.S. commercial and industrial loans in the first half of the year. U.S. securities dealers' liabilities to international bond funds in the Caribbean also increased strongly in the first half of the year.

Foreign holdings of U.S. securities other than U.S. Treasury securities increased \$442.0 billion to \$2,964.0 billion. Record net foreign purchases of U.S. corporate and agency bonds were spurred by higher yields on these issues than on U.S. Treasury bonds and on most other industrial countries' bonds, and by the safety of highly rated U.S. issuers. U.S. borrowers, including U.S. federally sponsored agencies, took advantage of the strong foreign demand and continued their strong issuance of new bonds abroad. Record net foreign purchases of U.S. corporate stocks were partly offset by sizable declines in U.S. stock prices.

Holdings of U.S. Treasury securities by private foreigners and international financial institutions decreased \$21.0 billion to \$639.7 billion. Net foreign sales rose in 2000 as foreign investors shifted to higher yielding U.S. corporate and agency securities. Partly offsetting was price appreciation, which reflected the rise in U.S. bond prices through most of the year, as U.S. long-term interest rates fell.

Foreign direct investment in the United States valued at current cost increased \$275.1 billion to \$1,369.5 billion; at market value, it decreased \$68.4 billion to \$2,736.9 billion. In 2000, net financial inflows of \$287.7 billion were lower than the prior year's record. By account: Net equity capital inflows slowed; reinvested earnings increased slightly; and net intercompany debt inflows slowed. At current cost, large net financial inflows more than accounted for the increase. At market value, large net financial inflows were more than offset by substantial price depreciation in owners' equity, resulting from the decline in U.S. stock prices.

Liabilities to unaffiliated foreigners reported by U.S. nonbanking concerns increased \$167.2 billion to \$722.7 billion, as U.S. corporate borrowing from foreign banks and from U.S. offshore finance affiliates increased sharply.

U.S. currency held by foreigners increased \$1.1 billion to \$251.8 billion.

Foreign official assets in the United States increased \$52.1 billion to \$922.4 billion; net financial inflows were augmented by price appreciation.

Detailed estimates of the U.S. direct investment abroad position and of the foreign direct investment in the United States position are presented in tables 2 and 3. These detailed estimates by country and by industry are available only on an historical-cost basis.

Revisions

Data are revised for 1996-99. The largest revision occurred in 1999. The negative net international investment position for yearend 1999 has been revised from \$1,082.5 billion to \$1,099.8 billion with direct investment at current cost, and from \$1,473.7 billion to \$1,525.3 billion with direct investment at market value. The major sources of these revisions are listed below.

* Estimates of the foreign direct investment position in the United States for 1997 forward on both the current-cost basis and the market-value basis have been revised to incorporate data collected in BEA's 1997 benchmark survey of foreign direct investment in the United States and revised quarterly survey results for subsequent years. (These improvements also affected financial flows in BEA's revised international transactions accounts, released on June 21, 2001.)

* Foreign holdings of U.S. securities other than U.S. Treasury securities are revised for

1999 as a result of a more complete accounting for large U.S. acquisitions of foreign companies, especially those acquisitions completed by exchanges of shares. (These improvements also affected financial flows in BEA's revised international transactions accounts, released on June 21, 2001.)

* U.S. nonbank liabilities are revised for 1996-2000 as a result of the substitution of BIS data on nonbank liabilities to foreign banks for U.S.-source data. (These improvements also affected financial flows in BEA's revised international transactions accounts, released on June 21, 2001.)

In addition to the above improvements, all estimates have been revised as a result of newly available or revised quarterly and annual survey results and other data. Most revisions attributable to updated source data are for 1997-99.

r Revised.

p Preliminary.

1. Represents gains or losses on foreign currency-denominated assets due to their revaluation at current exchange rates.

2. Includes changes in coverage, statistical discrepancies, and other adjustments to the value of assets.
